astro8404: Radio Interferometry - Methods and Science

uploading files via anonymous ftp

Please upload the deliverables of each milestone to this ftp area before the deadline:

ftp://ftp.astro.uni-bonn.de/incoming/muehle

If you don't know how to upload your data to the ftp area, here's a possible sequence of commands:

In a terminal, go to the directory where the files that you want to upload are located.

Then type at the prompt: `ftp` ftp.astro.uni-bonn.de

Log in as `anonymous`, giving your email address as password. The prompt will change to `ftp>`

If you want to upload your files from a computer outside of the AlfA network, you should set ftp into passive mode, i.e. at `ftp>` type `passive.`

Then type
```
ftp> cd incoming
ftp> cd muehle
ftp> put myfile_myname_1
ftp> put myfile_myname_2
...
ftp> quit
```

Other flavors of ftp like sftp, lftp etc. may work as well.

Please note: This ftp area is designed exclusively to receive incoming data. Therefore, you won't be able to see what has been uploaded once the transfer is complete. If you are uncertain whether your files have been uploaded correctly, please send an email to muehle<at>astro.uni-bonn.de.
